

Tillage RootMax™

GENETIC
Certified
PURITY

KEY BENEFITS

- Certified genetic purity
- Uniform stand maturity for easier burndown
- Very deep soil-building roots
- Late maturing, longer spring window
- Winter hardy
- Unique morphology
- High vegetative tillering
- Outstanding nutritional value
- Breaks up hardpan & compaction
- Scavenges nutrients, esp. nitrogen
- Speeds up transition to continuous no-till
- Increases crop yields and profits

Deep Root Technology: Now Available After 13 Years in Development

Tillage RootMax™ Deep Root Annual Ryegrass™ is the only variety certified for genetic purity for use as a cover crop. The certified genetic purity assures maximum performance of unique properties of this new annual ryegrass, including:

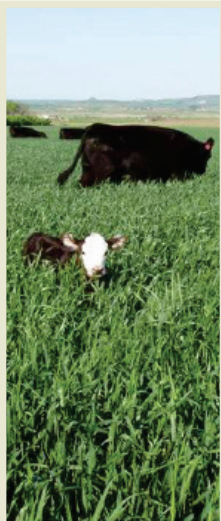

- Uniform emergence leads to more even growth
- Even growth makes for easier knockdown in the spring; one trip in most cases
- Roots go deeper than most other annual ryegrass varieties
- Soil structure is improved deeper in the profile, providing enhanced growing conditions for following cash crops
- Outstanding nutritional value for forage
- Excellent for grazing or haylage production

PLANTING TIPS & SEEDING RATE

Planting: Plant 30 days prior to the first killing frost

Seeding Rate:

- **Cover Crop:** 15 lbs/acre
- **Broadcast / Aerial Seeding:** 18-25 lbs/acre
- **Forage by Drill or Broadcast:** 20-30 lbs/acre
