

The NutriSolutions® Tool from WinField™ provides online analysis of a crop's nutritional profile based on tissue samples and crop conditions, and provides recommendations for improving yields and return on investment.

The NutriSolutions® Tool:

- Increases understanding of crop nutrient needs.
- Makes customized recommendations based on crop, stage of development, herbicide interactions and tissue sample results.
- Assists in reaching maximum yield potential and crop performance through understanding what crop nutrients are needed.

Benefits of a tissue test:

- Allows you to make adjustments that may help the crop achieve higher yields.
- Identifies crop nutritional needs that otherwise go unknown, which ultimately maximizes return potential on investment.
- When you apply nutrients based on the test, crop yield potential and acre profitability potential improve.

How to get a tissue test:

Consult Schertz Aerial Service, Inc. about a NutriSolutions® online database nutrition recommendation.

- Step One: Schertz Aerial Service, Inc takes a tissue sample.
- Step Two: The sample is submitted to a tissue-testing lab set up to work with the NutriSolutions® Tool.
- Step Three: Test results via email two to three days after submitting the sample.
- Step Four: Test results are uploaded into the online NutriSolutions® Tool that generates specific nutritional recommendation for your crop and field.
- Step Five: Schertz Aerial Service, Inc will meet with you to share the results of the tissue test and discuss any product recommendations.
