

Schertz Aerial Service, Inc.

**Policy Concerning Verification Maps
Application Shape Files**

Schertz Aerial Service, Inc. makes every effort to collect coverage data on each field that is sprayed. However, it takes extensive time to manage that information and prepare it for publication. Therefore, the following is our policy concerning releasing coverage data:

All data collected by Schertz Aerial Service, Inc. is considered propriety data.

Supplying verification data is not included in the application fee. There will be an additional charge for the information.

To aid the process, a request for verification maps should be placed with the initial spray order.

Every effort will be made to obtain the data. However, software and hardware technology still has errors in saving data, corrupted files, misnamed files and/or files unintentionally being deleted. Occasionally signal gaps and electronic momentary lapses will result lack of data on the recording. These skips in the data recorded DOES NOT indicate a skip in the spraying of the field.

All data will be inspected and signal errors corrected prior to being released.

Released data remains the copyright property of Schertz Aerial Service, Inc. and the data cannot be used for any purpose not previously specified or released to any entity or person without express written permission from Schertz Aerial Service, Inc.

Under no circumstances will raw data be released.
